# Cycles and reanalysis in inherent and contact-induced changes: Against a declarative analysis of depictive manner complements

#### Julia Bacskai-Atkari

#### University of Amsterdam / University of Potsdam

 $j. bacskaiatkari @uva.nl \ / \ julia. bacskai-atkari. 1 @uni-potsdam. de$ 

#### Adverbial clauses in argument positions Berlin, 5–6 April 2024

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### Introduction

cyclic changes in syntactic history: paths that can lead to the emergence of innovative patterns again and again

prototype: the Jespersen cycle of negative elements (see e.g. Wallage 2008, van der Auwera 2009, Hoeksema 2009) – English:

$$(1) \qquad \mathsf{ne} \to \mathsf{ne} \dots \ \mathsf{not} \to \mathsf{not}$$

van Gelderen (2009) identifies various paths in this respect – different domains involved (e.g. positions, features)

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### Declarative cycle

one potential case: the (purported) reanalysis of *wh*-based manner adverbs into declarative complementisers

- (2) They told me [how the tooth fairy doesn't really exist].
   'They told me that the tooth fairy doesn't really exist.'
   (Legate 2010, 121)
- $\rightarrow$  question: whether the reanalysis of  $\mathit{how}$  (and German  $\mathit{wie})$  can be supported

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

### Counterarguments

so far:

- synchronic syntax (Legate 2010)
- semantics (Umbach et al. 2023)

further counterarguments:

- inherent problems of the purported reanalysis process
- syntactic parallels with regular similative clauses
- distributional parallels with complementisers deriving from verbs of saying
- $\rightarrow$  proposal: reanalysis also problematic in terms of grammaticalisation theory

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# The problem

apparent equivalence of *how* and *that* in (2): lack of original manner interpretation associated with *how*-clauses

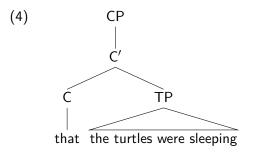

canonical position of that as a declarative complementiser in C

(3) He told me [CP that [TP the turtles were sleeping]].

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### Structure

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Manner adverbial clauses

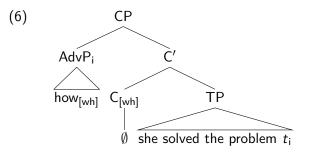

canonical manner adverbial clause with how:

(5) I don't know [CP **how**<sub>i</sub> [TP she solved the problem  $t_i$ ]].

Julia Bacskai-A<u>tkari</u>

University of Amsterdam / University of Potsdam

### Structure

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Declarative cycle

reanalysis proposed by van Gelderen (2009, 2015) for cases like

- (2): declarative cycle
- manner adverb reading absent
- base-generation in C rather than movement
- Feature Economy: base-generation preferred over movement

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Analysis

*how* in C – apparent structure:

- (7) They told me [CP **how** [TP the tooth fairy doesn't really exist]].
- $\rightarrow$  if so:  $\mathit{how}$  essentially equivalent to  $\mathit{that}$

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### Problems

but: *that* and *how* not interchangeable in several contexts (Legate 2010):

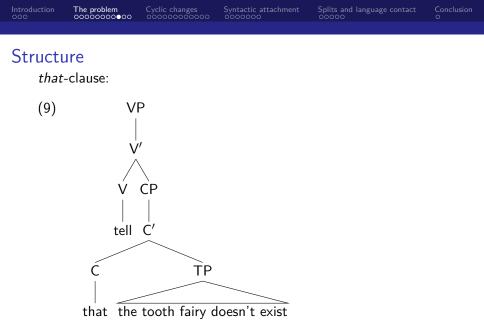

- (8) a. \*It was conceded [how the tooth fairy doesn't exist]. (Legate 2010, 124)
  - b. It was conceded [that the tooth fairy doesn't exist]. (Legate 2010, 124)

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

### Modified analysis

- base-generation in C correctly predicts the lack of the manner reading (Legate 2010, Nye 2013, see also Umbach et al. 2023)
- additional DP layer in the matrix clause predicts that depictive manner clauses pattern with DPs syntactically (Legate 2010)
- congruent with the semantics: the construction presupposes the existence of some discourse referent that is specified by the complement clause (Umbach et al. 2023)

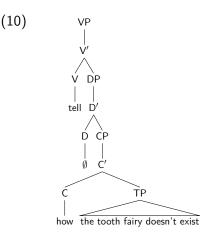

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

how-clause (as depictive manner complement, Legate 2010, 131):

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# $\rightarrow$ the manner depictive $how\mathchar`-clause$ functioning as a verbal complement is an illusion

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Cyclic changes

prototypical case of a cyclic change: the relative cycle (van Gelderen 2009)

- original relative pronoun reanalysed into a complementiser
- this reanalysis makes the [Spec,CP] position available for novel relative pronouns

change well-attested in the history of English

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Old English

original relative markers (Traugott 1992, van Gelderen 2009, Ringe & Taylor 2014):

- complementiser *þe*
- *d*-pronouns
- the combination of the above options

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### Combination

a. ac gif we asmeagab ba eadmodlican dæda but if we consider those humble deeds
ba be he worhte, bonne ne bincb us that.F.PL.ACC REL he wrought then not seems us bæt nan wundor that no wonder
'But if we consider the humble deeds that he wrought, then that will not appear marvellous to us.' (*Blickling Homilies* p. 33)

Cyclic changes

b. purh pæt pe he on pam gebede gehyrð 'through that.N.ACC REL he in this prayer hears 'through what he hears in this prayer' (Aethelwold, *The Benedictine Rule*, 884–885)

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Reanalysis

most frequent pattern in Old English involved the complementiser *be* (Traugott 1992, Ringe & Taylor 2014)

reanalysis of *that* into a complementiser:

- that was the most unmarked pronoun (singular, neuter, nominative/accusative)
- disappearance of *be*
- disappearance of the other *d*-pronouns

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### 

# Middle English

*that* attested as a complementiser on its on from Middle English onwards (see van Gelderen 2009):

(12) and suggeð feole þinges; bi Arðure þan kinge. // and say many things about Arthur the king þat næuere nes i-wurðen that never not-was happened 'and say many things about King Arthur that never happened.'
(Layamon, Brut, Caligula version, 11473–11474)

innovation in Middle English: appearance of *wh*-based relative pronouns (see, for instance, Mustanoja 1960, Rydén 1983, van Gelderen 2004, Gisborne & Truswell 2017, Bacskai-Atkari 2020, 2022)

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Change

- that replacing be in all contexts
- *be* completely lost

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### Features

- original phi features on *that* lost (see Bacskai-Atkari 2020)
- that has the same features as the earlier be
- $\rightarrow$  no split pattern in the form of (2) arises
- conversely: the split pattern in (2) indicates that *how* does not have the same features as *that* novel pattern has not superseded the older one
- structures synonymous in certain contexts but not others split not in the sense of complementary distribution

n Cyclic changes

Syntactic attachment

Splits and language contact

Conclusion 0

# Structural synonymy

#### (13) a. $[VP \text{ tell } [CP \text{ that } [TP \dots]]]$ b. $[VP \text{ tell } [DP \emptyset [CP \text{ how } [TP \dots]]]]$

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Lexical synonymy

- (14) a. I spent my **holidays/vacation** in Amsterdam.
  - b. Christmas and Easter are public holidays.

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### 

#### Other contexts

Bosnian-Croatian-Serbian complementisers *da* (with a wider distribution) and *što* (restricted to factives)

- a. Jesam ti rekao [da je Marija orišla na odmor]?
   AUX you told that AUX Marija gone on vacation 'Did I tell you that Marija went on vacation? (Arsenijević 2020, 341)
  - Jesam ti rekao [što je Marija orišla na odmor]?
     AUX you told that AUX Marija gone on vacation
     'Did I tell you that Marija went on vacation?' (it is a fact that she did) (Arsenijević 2020, 341)

Cycles and reanalysis in inherent and contact-induced changes: Against a declarative analysis of depictive manner complements

#### difference in factivity (Arsenijević 2020): *što*-declaratives have referential properties and are thus similar to relative clauses (see Krapova 2010, 1266 for Bulgarian and Macedonian and Bužarovska 2009 and Browne 1986, 69 for Macedonian; see also Aboh 2005 for factives being a special kind of relative clauses)

University of Amsterdam / University of Potsdam

### Economy

- economy: it is not expected that a single system should contain two fully grammaticalised declarative complementisers at the same time (NB process in principle possible, see also Bacskai-Atkari 2014)
- $\rightarrow$  the reanalysis of how as a complementiser cannot be considered the completion of a declarative cycle

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### Syntactic attachment

depictive manner complements not only with English *how* but also with German *wie* – narrower distribution (Umbach et al. 2023):

- (16) a. Frieda sah, [wie Georg das Fahrrad geschickt reparierte].
  'Frieda saw how George skillfully repaired the bike.'
  (Umbach et al. 2023)
  - b. \*Sie erzählten mir, [wie die Zahnfee nicht wirklich existiert].'They told me how the tooth fairy does not really

exist.'

(Umbach et al. 2023)

# Distribution

distribution depending on the embedding verb: possible with utterance verbs and perception verbs in English, but only with perception verbs in German (Umbach et al. 2023)

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### Similatives

wie a complementiser also in similative and equative clauses (see Jäger 2010, 2018, Bacskai-Atkari 2018, Bacskai-Atkari 2023b):

- (17) a. Die Krähe ist **(so)** [**wie** die Eule]. the.F crow is so how the.F owl 'The crow is like the owl.'
  - b. Die Krähe ist so schlau [wie die Eule].
     the.F crow is so clever how the.F owl
     'The crow is as clever as the owl.'

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### Grammaticalisation

grammaticalisation in Early New High German (see Jäger 2010, 2018) – loss of original manner adverb reading

matrix *so*: bleaching of the original manner deictic meaning (see Bacskai-Atkari 2023a for discussion):

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Matrix correlative element

*so* can be optional (in similatives) and it imposes selectional restrictions on the subclause:

- (19) \*Die Krähe ist (so) [als die Eule]. the.F crow is so as the.F owl 'The crow is like the owl.'
- $\rightarrow$  subclause a complement of the correlative element (Jäger 2018, Bacskai-Atkari 2018, Bacskai-Atkari 2023b)

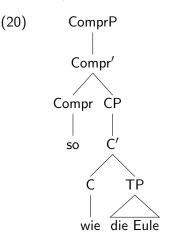

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### Structure

structure (Bacskai-Atkari 2023b):

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Structural parallelism

structural parallelism with depictive manner complements:

- (21) a. [<sub>vP</sub> ist [<sub>ComprP</sub> (so) [<sub>CP</sub> wie [<sub>TP</sub> ...]]]]
   b. [<sub>VP</sub> sah [<sub>DP</sub> Ø [<sub>CP</sub> wie [<sub>TP</sub> ...]]]]
- change from Compr to D: further semantic bleaching not only manner deictic but also comparison meaning lost
- but: the attachment of depictive manner complements via a matrix XP that establishes the referential interpretation of the subclause is the rule, not the exception

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Splits and language contact

arising new(ish) complementisers:

- internal change: reanalysis from another element
- contact-induced change

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

### Declarative cycle

further (purported) case of the declarative cycle by van Gelderen (2009): complementiser *se* from the lexical verb 'say' in Jamaican Creole:

(22) Him all swear [seh him was going to tell me].'He even swore that he was going to tell me.'(Patrick 2008, 627)

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

# Introduction The problem Cyclic changes Syntactic attachment Splits and language contact Conclusion

### Reanalysis

- reanalysis from V to C also assumed by Patrick (2008) but: process not completed, since *se* has a more restricted distribution than *that*: occurs only after predicates of speech, thought, perception or emotion
- all-purpose *dat* 'that' (Patrick 2008):
- (23) Dat mean him **deh** go tek set pon me.
   'That means that he is going to become malignly fixated upon me.'
   (Patrick 2008, 628)

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

## Split

- $\rightarrow$  Güldemann (2005): se a quotative complementiser
- $\rightarrow$  se/that split similar to the how/that split: that and the more specific complementiser synonymous in certain contexts but not in others

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

#### Diachronic scenario

- V-to-C reanalysis not unproblematic not attested in English otherwise, also downward grammaticalisation
- no transitional stages attested (↔ grammaticalisation of how)
   → Güldemann (2005): direct contact effect (from West African substrate languages), also in other Atlantic creole varieties
- importance of contact: similar complementisers also in other creole varieties of English – British Creole (Sebba 2008) and Liberian Settler English (Singler 2008)
- $\rightarrow$  splits arising from more specialised declarative-like complementisers not merely by-products of language-internal grammaticalisation

## Conclusion

status of depictive manner complements – question of the declarative cycle

- cycle evidently not completed partial split between how-clauses and that-clauses
- attachment via a matrix XP also attested in similative clauses (German *wie*-clauses)
- partial split also arising via other diachronic processes e.g. contact in Jamaican Creole (se)
- $\rightarrow$  declarative analysis of depictive manner complements problematic from a diachronic perspective as well

Julia Bacskai-Atkari

University of Amsterdam / University of Potsdam

Conclusion

## Thank you! Danke!

Julia Bacskai-Atkari
